

In the Claims:

Please amend the following claims:

A3
1. (amended) A screened housing for microwave circuits[,] comprising: a housing body having an interior, [and] said housing body being open at least at one side thereof; a cover closing said interior of said housing; a substrate mounted on an inner side of said cover; and means forming a plurality of chambers provided for accommodating of individual circuit units [and] so that said individual circuit units are screened from one another, said means including [a] said substrate [and applied] on [an] said inner side of said cover, and a plurality of webs which are formed directly on said substrate so that when said cover closes said housing body said webs form separating walls between said chambers.

A4
7. (amended) A screening housing for microwave circuits[,] comprising: a housing body having an interior [and], said housing body being open at least at one side thereof; a cover closing said interior of said housing; a substrate composed of a polymer with embedded metal particles and applied on an inner side of said cover; and means forming a plurality of chambers provided for accommodating of individual circuit units [and] so that said individual circuit units are screened from one another, said means including said substrate [a composed of a polymer with embedded metal particles and] applied on [an] said

Any
conceded

inner side of said cover, and a plurality of webs which are formed directly on said
[substrates] substrate so that when said cover closes said housing body said
webs form separating walls between said chambers.

A5

[Please add the following claim:]

- 8. A screening housing as defined in claim 7, wherein said
substrate and said webs are made from the same material and
formed of one piece with one another.—
-
